IT'S TIME TO TACKLE YOUR HEARING LOSS

We've got all the information you need to get back in the game. Let's get started.

How Do You Treat Different Types of Hearing Loss?

We'll let Dr. Shelby, Au.D., our resident audiologist extraordinaire, take this one.

Treating Different Types of Hearing Loss

Sensorineural Hearing Loss

Most age-related hearing loss is sensorineural hearing loss, and it's usually treated with hearing aids.

Conductive Hearing Loss

Conductive hearing loss is typically treated by a doctor, but hearing aids can also be an option.

Mixed Hearing Loss

Some aspects of mixed hearing loss may be able to be treated by a doctor (the conductive part), but the sensorineural part can only be treated with a hearing aid.
